think. visualize. build

Software Architecture & Development

We help you meet your business objectives through software. Where there is a business problem there is always a software solution for it. Bespoke software is our area, designing and building applications that suite your specific business. We are not limited to the size of your organization (large enterprise, small-to-medium enterprise), or the platform (mobile, desktop,web-based, windows etc) your infrastructure seats on, however we do major our design and development on the following technologies:

- Microsoft Silverlight
- Windows Azure
- ASP.NET MVC & Windows .NET Framework applications (Desktop or Windows Store)
- Adobe Flex
- Google Android
- Windows Phone
- Apple iOS

We do our best to adhere to practices defined in the Microsoft Solutions Framework and SWEBOOK (Software Engineering Body of Knowledge) in developing our and your products. QUALITY IS GUARANTEED

Business Process Re-engineering & Optimization

Our team of professionals will help you optimize your costs, efficiency and productivity of your business. THINK ~ VISUALIZE ~ BUILD is our thing. We will rethink and redesign the way work is done in your business to ensure that your ROI improves and you deliver quality of service to your clients. Coupling your process with our proficient skill-set in software engineering, we ensure that you embrace technology and gain a competitive edge as an entity.

Cloud & Shared services

We provide cloud-based solutions for industry and commerce. Leveraging the beauty of technology we help you cover the information gap within your organization and external stakeholders to your business. We will create reliable data links for a subset or full set of your business ecosystem.

COMPANY PROFILE

PRODUCTS

Minion is a lightweight accounting software application for small business scalable to enterprise businesses. This product will revolutionize your management, reporting and overall financial view of your business.

LearnManager is a long-term administration and academic assessment software application for academic institutions. It is a promise of what is to come in terms of improvement in technology and the development of new ideas and innovations for education. It gives institutions the expertise to organise and manage the systematic execution of academic & administrative processes.

Brokermate is an insurance broking software solution designed to improve the significant business processes between insurance companies & intermediaries such as brokers and banks. Brokermate is also ideal for bancassurance.

Serndosi is an easy to use but efficient practice management and claims processing software application. Medical practitioners and institutes such as clinics can utilize the functionality in Serndosi to keep track of their patient records, manage payments and follow up on medical aid claims. Serndosi has an integrated accounting module based on the Minion Accounting architecture.
